Percent Color Codes

This page demonstrates the percent representation of color of the form rgb(R%, G%, B%), where R, G, and B are the percent values for the red, green, and blue values of the color ranging from 0 to 100. This is one of the several ways you can define colors in HTML or style sheets; you can use a quick reference table to help you choose from among the many color tables available.

The colors in the chart below come from a variety of sources. Color swatches are defined by using the hexadecimal code for the color and are sorted by the hexadecimal code. The color names are descriptive and shouldn't be used to specify a color unless you are using the 16 named colors or SVG colors.

Click on the   graphic on any page to see a table of color tables available or to see

the meaning of the labels (Safe 16 SVG Hex3).

black(Safe 16 SVG Hex3) rgb(0%, 0%, 0%)		midnightblue(Safe Hex3) rgb(0%, 0%, 20%)		navy(16 SVG) rgb(0%, 0%, 50%)
